Description

The NK-AP7335A-50 is a 300mA, 5.0V fixed output voltage, low-dropout linear regulator with $\pm 1\%$ output voltage accuracy. The device includes pass element, error amplifier, band-gap, current limit and thermal shutdown circuitry. The device is turned on when EN pin is set to logic high level.

The characteristics of low-dropout voltage and low-quiescent current make it suitable for low-power applications, for example, battery powered devices. The typical quiescent current is 35 μ A. Built-in, current-limit and thermal-shutdown functions prevent IC from damage in fault conditions.

This device is only available as a 5.0V fixed version. Please contact your local sales office for any other voltage options.

The NK-AP7335A-50 is packaged in SOT25 and U-DFN2020-6.

Features

- 300mA Low Dropout Regulator with EN
- Very Low I_Q 35 μ A
- Fixed Output at 5.0V
 - $V_{IN(MIN)}$ 5.5V
- High PSRR: 65dB at 1kHz
- Fast Start-up Time 220 μ s
- Stable with Low ESR, 1 μ F Ceramic Output Capacitor
- Excellent Load/Line Transient Response
- Low Dropout 150mV at 300mA
- Current Limit and Short Circuit Protection
- Thermal Shutdown Protection
- Ambient Temperature Range -40 $^{\circ}$ C to +85 $^{\circ}$ C
- SOT25, and U-DFN2020-6 Available in "Green" Molding Compound (No Br, Sb)

Pin Assignments

Applications

- Smart Phones
- MP3/MP4s
- Battery-Powered Devices
- Bluetooth Headsets
- Battery Chargers
- LCD TVs
- Multifunction Monitors

Typical Applications Circuit

Pin Descriptions

Pin Number	Package Name		Function
	SOT25 (Fixed)	U-DFN2020-6 (Fixed)	
IN	1	3	Voltage input pin. Bypass to ground through at least 1µF MLCC capacitor
GND	2	2	Ground
EN	3	1	Enable input, active high
NC	4	5, 6	No connection
OUT	5	4	Voltage output pin. Bypass to ground through 1µF MLCC capacitor

Functional Block Diagram

Absolute Maximum Ratings (@ $T_A = +25^\circ\text{C}$, unless otherwise specified.) (Note 4)

Symbol	Parameter	Rating	Unit
V_{IN}	Input Voltage	6.5	V
V_{OUT}, V_{EN}	OUT, EN Voltage	$V_{IN} + 0.3$	V
I_{LIMIT}	Continuous Load Current per Channel	Internal Limited	mA
T_{ST}	Storage Temperature Range	-65 to +150	$^\circ\text{C}$
ESD HBM	Human Body Model ESD Protection	2,000	V
ESD MM	Machine Model ESD Protection	200	V

Note: 4. Stresses greater than the 'Absolute Maximum Ratings' specified above, may cause permanent damage to the device. These are stress ratings only; functional operation of the device at these or any other conditions exceeding those indicated in this specification is not implied. Device reliability may be affected by exposure to absolute maximum rating conditions for extended periods of time.

Recommended Operating Conditions (@ $T_A = +25^\circ\text{C}$, unless otherwise specified.)

Symbol	Parameter	Min	Max	Unit
V_{IN}	Input voltage (Note 6)	5.5 (Note 6)	6	V
I_{OUT}	Output Current (Note 5)	0	300	mA
T_A	Operating Ambient Temperature	-40	+85	$^\circ\text{C}$

Notes: 5. The device maintains a stable, regulated output voltage without a load current.
 6. $V_{IN(MIN)} = 5.5\text{V}$ for 5.0V, V_{OUT} at 300mA I_{OUT} .

Electrical Characteristics (@T_A = +25°C, unless otherwise specified.)

 (T_A = +25°C, V_{IN} = 5.5 to 6V, C_{IN} = 1μF, C_{OUT} = 1μF, V_{EN} = 2V, unless otherwise stated)

Symbol	Parameter	Test Conditions	Min	Typ.	Max	Unit
V _{OUT}	Output Voltage Accuracy	T _A = -40°C to +85°C, I _{OUT} = 10% of I _{OUT-Max}	-1	-	1	%
$\frac{\Delta V_{OUT}}{\Delta V_{IN}/V_{OUT}}$	Line Regulation	V _{IN} = 5.5V to 6V, V _{EN} = V _{IN} , I _{OUT} = 1mA	-	0.02	0.20	%/V
$\frac{\Delta V_{OUT}}{I_{OUT}}$	Load Regulation	V _{IN} = 5.5V to 6V, I _{OUT} = 1mA to 300mA	-0.6	-	0.6	%
V _{DROPOUT}	Dropout Voltage (Note 7)	I _{OUT} = 300mA	-	150	200	mV
I _Q	Input Quiescent Current	V _{EN} = V _{IN} , I _{OUT} = 0mA	-	35	80	μA
I _{SHDN}	Input Shutdown Current	V _{EN} = 0V, I _{OUT} = 0mA	-	0.1	1	μA
I _{LEAK}	Input Leakage Current	V _{EN} = 0V, OUT Grounded	-	0.1	1	μA
T _{ST}	Start-up Time	V _{EN} = 0V to 2.0V in 1μs, I _{OUT} = 300mA	-	220	-	μs
PSRR	PSRR	V _{IN} = 5.5V _{DC} + 0.5V _{PPAC} , f = 1kHz, I _{OUT} = 50mA	-	65	-	dB
I _{SHORT}	Short-circuit Current	V _{IN} = V _{IN-Min} to V _{IN-Max} , V _{OUT} < 0.2V (Fixed)	-	160	-	mA
I _{LIMIT}	Current limit	V _{IN} = V _{IN-Min} to V _{IN-Max} , V _{OUT} /R _{OUT} = 1.2A	400	650	-	mA
V _{IL}	En Input Logic Low Voltage	V _{IN} = V _{IN-Min} to V _{IN-Max}	-	-	0.4	V
V _{IH}	En Input Logic High Voltage	V _{IN} = V _{IN-Min} to V _{IN-Max}	1.4	-	-	V
I _{EN}	En Input Current	V _{IN} = 0V or V _{IN-Max}	-1	-	1	μA
T _{SHDN}	Thermal Shutdown Threshold	-	-	+145	-	°C
T _{HYS}	Thermal Shutdown Hysteresis	-	-	+15	-	°C
θ _{JA}	Thermal Resistance Junction-to-Ambient	SOT25 (Note 8)	-	187	-	°C/W
		U-DFN2020-6 (Note 8)	-	251	-	

Notes: 7. Dropout voltage is the voltage difference between the input and the output at which the output voltage drops 2% below its nominal value.
 8. Test condition for all packages: Device mounted on FR-4 substrate PC board, 1oz copper, with minimum recommended pad layout.

Performance Characteristics

Performance Characteristics (Cont.)

Application Note

Input Capacitor

A 1 μ F ceramic capacitor is recommended between IN and GND pins to decouple input power supply glitch and noise. The amount of the capacitance may be increased without limit. This input capacitor must be located as close as possible to the device to assure input stability and reduce noise. For PCB layout, a wide copper trace is required for both IN and GND pins. A lower ESR capacitor type allows the use of less capacitance, while higher ESR type requires more capacitance.

Output Capacitor

The output capacitor is required to stabilize and improve the transient response of the LDO. The NK-AP7335A-50 is stable with very small ceramic output capacitors. Using a ceramic capacitor value that is at least 1 μ F with ESR > 15m Ω on the output ensures stability. Higher capacitance values help to improve line and load transient response. The output capacitance may be increased to keep low undershoot and overshoot. Output capacitor must be placed as close as possible to OUT and GND pins.

No Load Stability

No minimum load is required to keep the device stable. The device will remain stable and regulated in no load condition.

ON/OFF Input Operation

The NK-AP7335A-50 is turned on by setting the EN pin high, and is turned off by pulling it low. If this feature is not used, the EN pin should be tied to IN pin to keep the regulator output on at all time. To ensure proper operation, the signal source used to drive the EN pin must be able to swing above and below the specified turn-on/off voltage thresholds listed in the Electrical Characteristics section under V_{IL} and V_{IH} .

Current Limit Protection

When output current at OUT pin is higher than current limit threshold, the current limit protection will be triggered and clamp the output current to approximately 650mA to prevent overcurrent and to protect the regulator from damage due to overheating.

Short Circuit Protection

When OUT pin is short-circuit to GND, short circuit protection will be triggered and clamp the output current to approximately 160mA. This feature protects the regulator from overcurrent and damage due to overheating.

Thermal Shutdown Protection

Thermal protection disables the output when the junction temperature rises to approximately +145°C, allowing the device to cool down. When the junction temperature reduces to approximately +130°C the output circuitry is enabled again. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits the heat dissipation of the regulator, protecting it from damage due to overheating.

Ultra Fast Start-Up

After enabled, the NK-AP7335A-50 is able to provide full power in as little as tens of microseconds, typically 220 μ s, without sacrificing low ground current. This feature will help load circuitry move in and out of standby mode in real time, eventually extend battery life for mobile phones and other portable devices.

Application Note

Fast Transient Response

Fast transient response LDO can extend battery life. TDMA-based cell phone protocols such as Global System for Mobile Communications (GSM) have a transmit/receive duty factor of only 12.5 percent, enabling power savings by putting much of the baseband circuitry into standby mode in between transmit cycles. In baseband circuits, the load often transitions virtually instantaneously from 100 μ A to 100mA. To meet this load requirement, the LDO must react very quickly without a large voltage drop or overshoot — a requirement that cannot be met with conventional, general-purpose LDO.

The NK-AP7335A-50's fast transient response from 0 to 300mA provides stable voltage supply for fast DSP and GSM chipset with fast changing load.

Low Quiescent Current

The NK-AP7335A-50, consuming only around 35 μ A for all input range, provides great power saving in portable and low power applications.

Power Dissipation

The device power dissipation and proper sizing of the thermal plane that is connected to the thermal pad is critical to avoid thermal shutdown and ensure reliable operation. Power dissipation of the device depends on input voltage and load conditions and can be calculated by:

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT}$$

The maximum power dissipation, handled by the device, depends on the maximum junction to ambient thermal resistance, maximum ambient temperature, and maximum device junction temperature, which can be calculated by the following equation:

$$P_D (\text{max}@T_A) = \frac{(+145^\circ\text{C} - T_A)}{R_{\theta JA}}$$

Package Outline Dimensions (All dimensions in mm.)

(1) Package Type: SOT25

SOT25			
Dim	Min	Max	Typ
